

How to Download and Install Nmap

Step-by-step guide with screenshots (Windows installation).

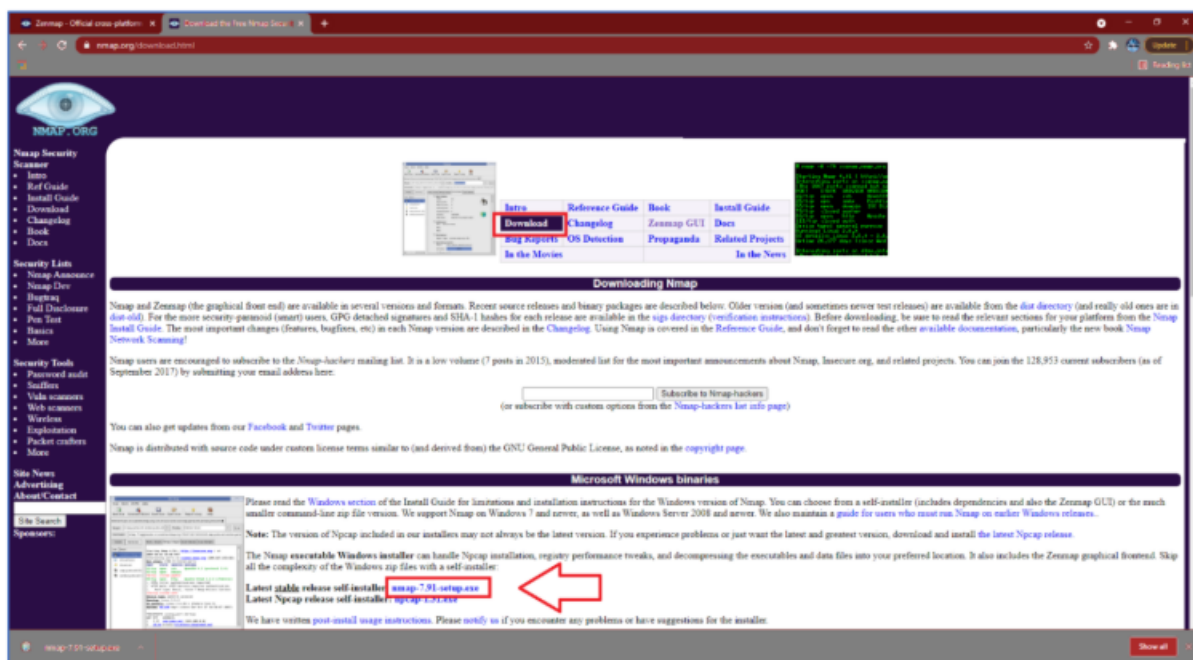

Official Download Link

Always download Nmap only from the official website to avoid fake or malicious copies:

<https://nmap.org/download.html>

Step 1 – Go to the Nmap Download Page

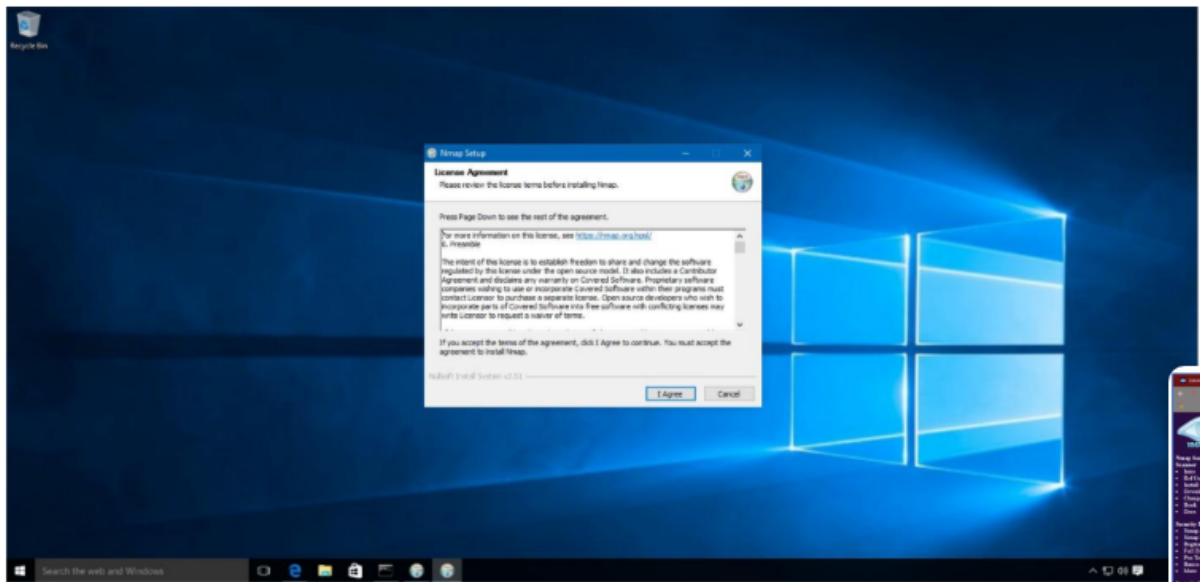

Open your browser and visit nmap.org/download.html. Scroll down to the **Microsoft Windows binaries** section and click the latest **nmap-<version>-setup.exe** link (highlighted below) to start the download.

The official Nmap download page – Windows installer link highlighted.

Step 2 – Accept the License Agreement

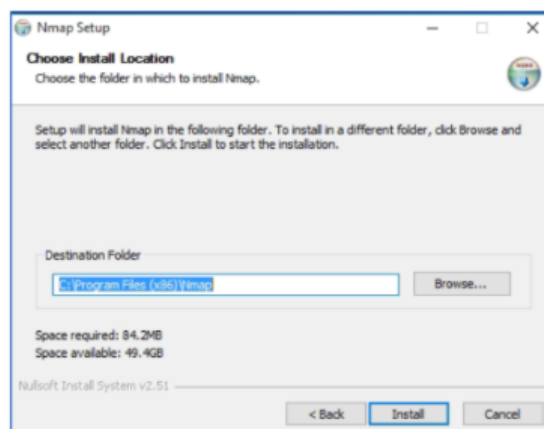

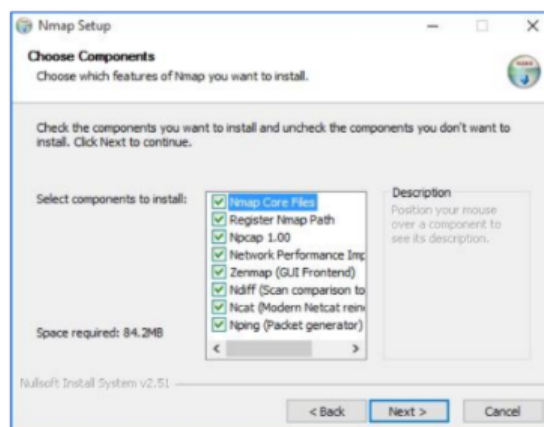

Run the downloaded setup.exe file. On the License Agreement screen, review the terms and click **I Agree** to continue.

Nmap Setup – License Agreement screen.

Step 3 – Choose Components and Install Location

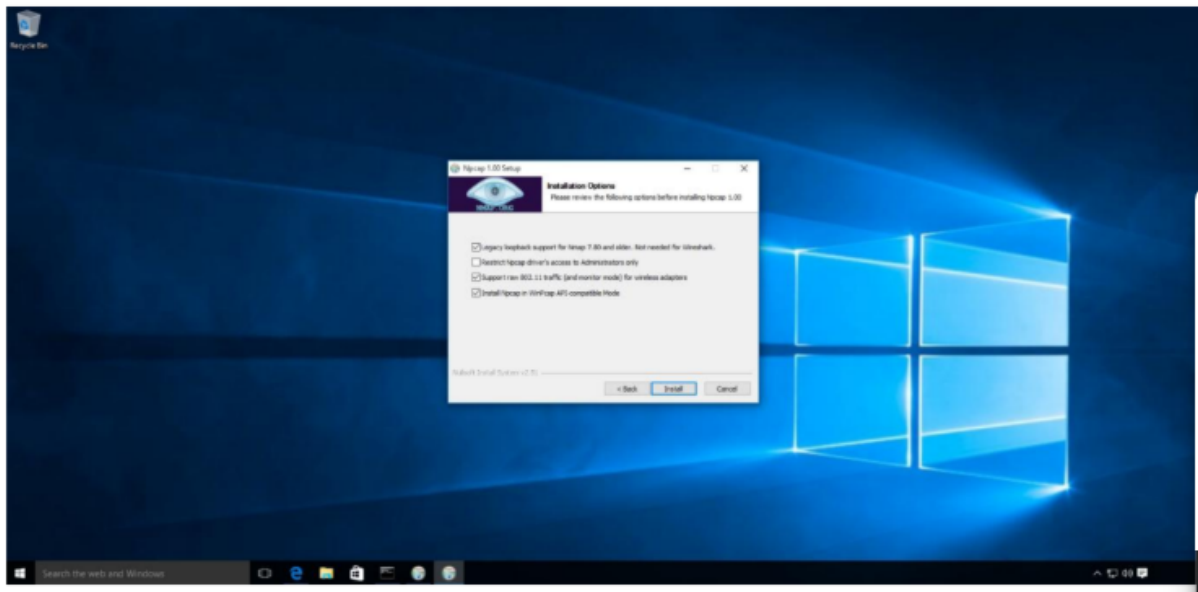

Keep all components checked, including **Npcap** and **Zenmap (GUI Frontend)**, then click **Next**. Choose the install folder (the default is fine) and click **Install**.

Choosing components and the install location.

Step 4 – Install Npcap

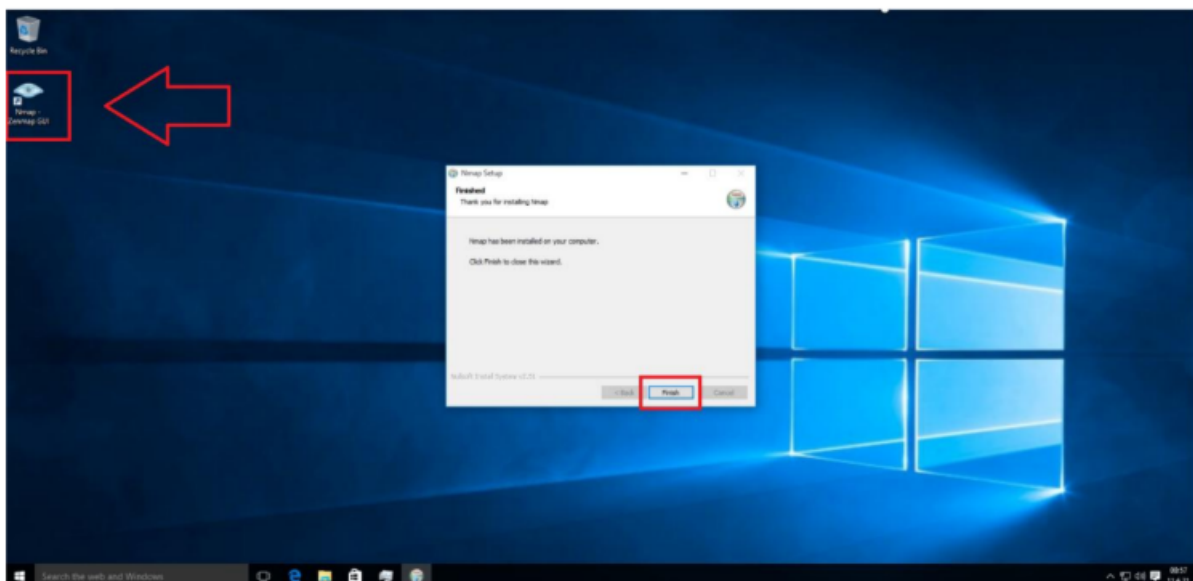

A separate Npcap setup window will open. Review the installation options and click **Install** to continue. Npcap is required for Nmap to capture network packets.

Npcap installation options window.

Step 5 – Finish Installation

Once installation completes, click **Finish** to close the setup wizard. You will now see the **Nmap - Zenmap GUI** shortcut on your desktop, which you can use to launch Zenmap.

Installation finished – Zenmap GUI shortcut created on the desktop.

Step 6 – Verify the Installation

Open Command Prompt and type the following command. If it prints a version number, Nmap has installed correctly:

```
nmap --version
```

Note: Nmap is a powerful network scanning tool. Only use it on networks and systems you own or have explicit written permission to test.
